1 Introduction

2 Methods

3 Results

When observing the error vs. entropy graphs of confusion matrices there were different groups the results could be catergorized in. There were some sounds in itial and final positions that where easily recognized by all the subjects, unrecognizable by all the subjects and the interesting cases where there was an obvious seperation between the reading able and reading disbaled subjects.

3.1 Comprehended by All

3.2 Comprehended by None

3.3 Intresting Case

4 Discussion

I'm writing words so tayo believes me.
