

*Professor Allen is an excellent instructor who takes the time to teach each and every concept that a student is confused about. He very patient and will work with you to make sure you understand it.

This course is very important in order for understanding the math behind the Laplace Transforms, Fourier Transforms, etc in Signal Processing classes. This class helped me really put together the concepts that I was learning in ECE 210 that I was introduced to very quickly and understand the meaning behind them from taking this class.

I suggest this class be a required class for all students who are EE majors as this class definitely helps fill a lot of the gaps about the math and reasoning behind why we use certain formulas, transforms, etc.

*I enjoyed the class tremendously.

*I think Professor Allen does an incredible job of teaching this course. I think the course is fine as is.

*I think more foundational math classes like this should be taught in ECE and should be required. I really enjoyed the class.
