

Chapter 1

Number systems

1.1 Problems NS-1

Topic of this homework:

Introduction to Matlab/Octave (see the Matlab or Octave tutorial for help)

Deliverables: Report with charts and answers to questions.

Plotting complex quantities in Octave/Matlab

Problem # 1: Consider the functions $f(s) = s^2 + 6s + 25$ and $g(s) = s^2 + 6s + 5$.

– 1.1: Find the zeros of functions $f(s)$ and $g(s)$ using the command `roots()`.

Ans:

– 1.2: Show the roots of $f(s)$ as red circles and of $g(s)$ as blue plus signs.

The x -axis should display the real part of each root, and the y -axis should display the imaginary part. Use `hold on` and `grid on` when plotting the roots.

Ans:

– 1.3 Give your figure the title “Complex Roots of $f(s)$ and $g(s)$.” Label the x - and y -axes “Real Part” and “Imaginary Part.” Hint: Use `xlabel`, `ylabel`, `ylim([-10 10])`, and `xlim([-10 10])` to expand the axes.

Problem # 2: Consider the function $h(t) = e^{j2\pi ft}$ for $f = 5$ and $t = [0:0.01:2]$.

– 2.1: Use `subplot` to show the real and imaginary parts of $h(t)$.

Make two graphs in one figure. Label the x -axes “Time (s)” and the y -axes “Real Part” and “Imaginary Part.”

Ans:

– 2.2: Use `subplot` to plot the magnitude and phase parts of $h(t)$.

Use the command `angle` or `unwrap(angle())` to plot the phase. Label the x -axes “Time (s)” and the y -axes “Magnitude” and “Phase (radians).”

Ans:

Prime numbers, infinity, etc. in Octave/Matlab

Problem # 3: Prime numbers, infinity, etc.

– 3.1: Use the Matlab/Octave function `factor` to find the prime factors of 123, 248, 1767, and 999,999.

Ans:

– 3.2: Use the Matlab/Octave function `isprime` to check if 2, 3 and 4 are prime numbers.

What does the function `isprime` return when a number is prime, or not prime? Why?

Ans:

– 3.3: Use the Matlab/Octave function `primes.m` to generate prime numbers between 1 and 10^6

Save them in a vector `x`. Plot this result using the command `hist(x)`. **Ans:**

– 3.4: Now try $[n, \text{bincenters}] = \text{hist}(x)$.
Use `length(n)` to find the number of bins. [Ans:](#)

– 3.5: Set the number of bins to 100 by using an extra input argument to the function `hist`.
Show the resulting figure and give it a title and axes labels. [Ans:](#)

Problem # 4: *Inf, NaN and logarithms in Octave/Matlab*

– 4.1: Try `1/0` and `0/0` in the Octave/Matlab command window.
What are the results? What do these ‘numbers’ mean in Octave/Matlab? [Ans:](#)

– 4.2: Try `log(0)`, `log10(0)` and `log2(0)` in the command window.
In Matlab/Octave, the natural logarithm $\ln(\cdot)$ is computed using the function `log`. Functions \log_{10} , and \log_2 are computed using `log10` and `log2`. [Ans:](#)

– 4.3: Try `log(1)` in the command window. What you expect for `log10(1)` and `log2(1)`?
[Ans:](#)

– 4.4: Try `log(-1)` in the command window. What do you expect for `log10(-1)` and `log2(-1)`?
[Ans:](#)

– 4.5: Show how Matlab/Octave arrives at the above answer because $-1 = e^{i\pi}$.

Ans:

– 4.6: Try `log(exp(j*sqrt(pi)))` (i.e., $\log e^{j\sqrt{\pi}}$) in the command window. What do you expect?

Ans:

– 4.7: What does inverse mean in this context? What is the inverse of $\ln f(x)$?

Ans:

– 4.8: What is a decibel? (Look up decibels on the internet.)

Ans:

Problem # 5: Very large primes on Intel computers

– 5.1: Find the largest prime number that can be stored on an Intel 64 bit computer, *which we call*

π_{\max} .

Hint: As explained in the Matlab/Octave command `help flintmax`, the largest positive integer is 2^{53} , however the largest integer that can be factored is $2^{32} = \sqrt{2^{64}}$. Explain the logic of your answer. Hint: `help isprime()`. Ans:

Problem # 6: *Suppose you are interested in primes that are greater than π_{\max} . How can you find them on an Intel computer (i.e., one using IEEE-floating point)?*

– 6.1: *Extending the number of primes you may considered.*

Hint 1: Use `uint64` (`myprimes`) to extend the numbers unsigned 64 bit integers (we don't need negative primes). Hint 2: Since every prime number greater than 2 is odd, there is no reason to check the even numbers. Starting from 3 (not 2). $n_{\text{odd}} \in \mathbb{N}/2$ contain all the primes other than 2. **Ans:**

Problem # 7: *The following identity is interesting:*

$$\begin{aligned}
 1 &= 1^2 \\
 1 + 3 &= 2^2 \\
 1 + 3 + 5 &= 3^2 \\
 1 + 3 + 5 + 7 &= 4^2 \\
 1 + 3 + 5 + 7 + 9 &= 5^2 \\
 &\dots \\
 \sum_{n=0}^{N-1} 2n + 1 &= N^2.
 \end{aligned}$$

– 7.1: *Can you find a proof?*¹

Ans:

¹This problem came from an exam problem for Math 213, Fall 2016.
