Generalized Metamaterials: Definitions and Taxonomy  
The Journal of the Acoustical Society of America

Dear Noori Kim,

The new revised paper has addressed the points that I found in a very cursory reading of the first revision. I am pleased to say that it is accepted for the Special Issue on Apr 26, 2016

That said, I strongly urge you to update the text at the time of the proofs or earlier if possible. The paper is a useful contribution, and based on the title is likely to attract a good readership. It is imperative that the text reflect this. There is certainly room for improvement, for instance:

"Recent efforts realizing and optimizing cloaks on AMMs were recently published (Cai, 2012; Gokhale et al., 2012)."

With best regards

Andrew N Norris, Ph.D.  
Associate Editor
